Phase 6 - Integration Defect Report

Shawn Yama, Liangyu Zhao, Moiz Abdul

Problem 1	Solution
items.txt isn't updated after a new item is being entered into the system by a seller.	The loop calling the process function in the main folder stopped when a user logged out. We changed it so it stops once the merged transactions file is done being read.

Problem 2	Solution
Writer.java writes to local level item/user files.	File path for writer.java changed to write to user/item files in the root folder.

Problem 3	Solution
Bash script not working properly on some machines.	Don't use Windows Subsystem for Linux. Some shell features worked on WSL while others didn't. Actual Linux and macOS runs it properly.
